628 672 681 in most cases. However, if the ransom is not paid, the members of the injured group, with the consent of the mutwale, proceed to execute the victim. They take the captive to a remote place and first cut off his hands, then his feet, and eventually also the ears, nose, and tongue. Then the unfortunate victim is nailed to the ground by piercing four poles through his arms and thighs; there he finally receives the death blow through his chest (No. 19, p. 472). Another method of execution is to drive a sharp pole through his anus into his body up to his throat. The body is then exhibited in a public place. The vendetta takes similar forms among the other Bahima, down to the far south in Ufipa (No. 47, pp. 108-111). Stealing cattle and witchcraft are punished in the same cruel manner in Urundi.

762 [98] Persons intending to commit suicide, who are not by any means rare either in Urundi or Ruanda, usually kill themselves by hanging or drowning.

695 It appears that the oath (indahiro), the invocation of the deity, the manes, or the king for the purpose of affirming a statement, is not permitted as a legal device among the Barundi who, incidentally, "use oaths, curses, sorcery, lies, or trickery" copiously.. On the other hand, a judge frequently inflicts the ordeal on the accused, especially if it is a case where he has charged with witchcraft and sorcery (No. 19, p. 405). Most often this takes the form of the spear test. It consists of stabbing the accused person's arm with a hot spear point. If the blood gushes out, he is judged guilty; if not, he is considered innocent. The water test is applied by making the accused place his hand into a pot of boiling water. If his hand is scalded, he is considered guilty, otherwise, not. Also, under certain conditions, the poison test is used, a custom found all over Africa. Of course, there exist all kinds of methods designed to make the ordeal come out correctly, like greasing or powdering one's skin; using counter-poisons, etc.

643 Hence the following beliefs, to which the common people have given credence up to now.

644 In principle, in the old days the sovereign was not permitted
855 to see his heir. The child was entrusted to the care of reliable men and raised far from his father, who occasionally was brought pieces of string which had served to measure the height and waist of his future successor. In order to judge the development and strength of the young prince, the king imprinted the outline of his own foot in a basket of sorghum flour. This was brought to the crown prince, who in turn left in it the imprint of his foot. The basket was returned to the king, who never lost interest in the physical development of his child.

Bows were later sent to him so that he might try his strength. The heir was considered worthy of the throne on the day when he was able to string his father's bow, since now he had become as strong as his father.

643 The last verifications were made. It was necessary to make sure that the king's garment fitted him perfectly, and that the im-
•762 print of his feet matched exactly that of his father's. The latter, on the other hand, having grown old and noticed that his beard and hair were greying, (yamez' imvi), decided himself that his time had come. He immediately called his confidants and made known his last wishes. "I am going to depart (gutabara); there are only a few moments left to me. You shall see to it that my son rules (kwimika) in my place. You shall obey him in all things"....

The same evening the appointed sorcerers presented him /516/
[278] with hydromel (inkangaza) in which they had mixed a violent poison, purchased, it is believed, on the shores of Lake Victoria, where it was prepared with putrefied crocodile flesh.

The king went to sleep and never awakened. "He has drunk" (yanyone), as they said in official terminology, or else "He has departed" (yatabaye), he has rejoined his ancestors, the Liberators, who saved the land, "He has ceded the throne" (yatanze), "The sky has fallen" (ijuru ryaguye), for such are the expressions still consecrated by usage and used to proclaim this serious event.

762 When a man committed suicide, he was buried as usual;
766 but a medicine-man was summoned to tell by augury whether
787 the house had to be deserted or was still fit to live in.

RELIGION

773 I received a statement respecting the religion of the Batuse
[115] from Captain Phillips, the District Commissioner. They were,
[776] he said, monotheistic and had a chief priest who was initiated
into his office by a journey up a certain mountain where there
[778] was said to be a flock of sheep sacred to the god. This was a
[782] dangerous exploit, but before a man was accepted as priest
he had to go there with a sheep, which he offered to the god.

This chief priest kept all the fetishes and carried out all religious observances for the king, who kept neither fetishes nor priests about him. When there was any illness or other trouble, the king sent a bull, a sheep, or a fowl (in the case of
[787] war, a bull, a ram, or a cock) to the priest, and an augury was taken from the flow of blood and from the markings on the lungs and intestines.

CHAPTER XXIX

THE KING

The kings of Ruanda—government and taxation by the king—food of the king—wives of the king—heir to the king—death of the king—mourning—burial—accession—the king's mother and her brother

643 THE list of the kings of Ruanda was given as follows: Kigwa,
173 who came from heaven—his son, Kimanuke, who begat Randa — Merano — Kobo — Gihanga — Kalyaruanda — Ruganza — Kirimu — Kigeri — Mutabazi — Gahima — Ndahiru — Ndole — Muhenzi — Namuhesera — Sekalongoro — Huhi — Kirima — Ndabalasa — Mubamwhe — Gahiridirwa — Lwogera — Lwabugiri — Lutariridwa, who was killed by his brother Musinga, who still reigns.

692 The king's court was the court of appeal for all his subjects
645 and his council was composed of the high chiefs.

and his council was composed of the high chiefs. He imposed taxation of honey, millet, peas, beans, cattle, and milk, and the chiefs were responsible for any building or other state work he required.

The king's first meal in the morning was of milk, which he took either fresh or clotted as he preferred. At noon he generally drank beer, but he took no other food until evening, when he had meat with peas, beans, or millet porridge, but he might never eat sweet potatoes. After this meal he drank either beer or milk, which shows that the people were abandoning the strict rules of the milk diet which would have forbidden his drinking milk immediately after eating meat and vegetables. During the night he was roused and offered milk to drink. The favourite wife waited upon him and ate with him, and special boy attendants ate any meat that was left over from his meal.

The king married as many wives as he wished, suitable girls being added to his harem as they were found. The favourite of the moment was treated as the chief wife. These women were continually consulting medicine-men and priests, who told them whether they were going to bear children and took auguries to decide who would be the mother of the future king. The king often chose a prince to succeed him, and when he grew up informed him of his future and made him a partner with him on the throne. The other princes were sent to govern different parts of the country as chiefs.

When the king felt that he was seriously ill, he ended his life by taking poison. When he died the news was circulated over the country. There was no rule against naming the king after his death nor against saying that he was dead. The whole tribe shaved their heads and all men kept apart from women during the two months of mourning. The males of cows, goats, and sheep were also separated from their females for this time, and the udders of cows, after milking, were smeared with ashes instead of with white clay as was usual at other times. One cow was killed when the king died.

A certain district was reserved for the burial of the kings,

physiological aspect of sexuality. They do not seem to have thought of sexual relations as the fulfilment of a romantic love between two individuals meant to mate with each other and nobody else. The way spouses were chosen by the two patrilineages prevented any such ideas, for the choosing of spouses rested on the assumption that any boy and any girl of the right age and reasonably attractive could be good partners in marriage and sexuality. But feelings of sympathy and affection developed later as a result of their life together rather than as its basis. According to our informants, love, in the sense of attractiveness based on individual characteristics, was greater in non-marital relations. 'One slept with a certain woman to make her happy because one liked her,' I was told.

Various prohibitions and obligations indicate how sexuality in marriage was related to events concerning the community and the patrilineage. During the mourning period for the husband's father and mother, which lasted one, two or three months according to the region, intercourse was prohibited for both husband and wife. It was also prohibited for one moon after the death of the wife's child, and for two or three moons for the surviving spouse when one of the spouses died. The meaning of this taboo was not only that one had to refrain from enjoying oneself when one should have been in sorrow. It meant also a certain symbolic participation in death or in the diminution of life affecting the patrilineage. This is, I think, what informants have in mind when they say in this connexion that sex is a sacred activity. This interpretation seems to be supported by what happened when a king died. Not only had all Ruanda to be continent for a certain period (some informants said two moons, others one year), but the bulls were separated from cows and rams from sheep. The king (*mwami*) was identified with Ruanda. If he was strong, Ruanda was strong, if he was getting old and weak, he had to commit suicide because he endangered the country's life. In that context, if animals were prevented from mating it was to express symbolically the idea of the death of the community rather than, it seems, to deny them pleasure.

On the other hand, intercourse was obligatory when events fortunate for the patrilineage or the community at large occurred. For instance when a new hut was occupied, when six days had passed after the birth of a child, when the first teeth of the baby
